Its time to clean after the spring explosion!

Is your garden out growing its self? Now is the time to clean up, remove old foliage from underneath the new growth, lay mulch whilst the ground is still moist, apply fertiliser, harvest your winter veg before all your good work is spoilt, get set to fill gaps with summer colour. Summer annuals planted now will give you a fantastic display until March!

You've had 4 weeks of enjoying your garden, now its time to get back to work! clean up now to avoid excess effort over summer, less watering and have your place looking the best for your holiday guests.
